

1. Padding

Space inside an element,
between its content and its border

2. Border

Line that goes around an element's
padding and content.

3. Margin

Space outside the border

4. Cascading

Rule that determines which
styles are applied to an element
when multiple styles could affect it

5. Specificity

In CSS, specificity is a calculation
the browser uses to decide which
CSS rule applies when multiple rules
target the same element

inline > id > class > element > universal selector

6. Order Rule

When multiple CSS rules have same specificity, the rule that comes last in CSS wins

Specificity > order rule

7. Important Rule

~~A specificity~~

A way to make a specific CSS declaration override all other rules even those with higher specificity
